

Look for tags on Lake Washington sockeye below the dorsal fin Chance to win a Lamiglas rod and Shimano reel!

Tags are part of a University of Washington project studying the migration and movement patterns of Lake Washington sockeye salmon. The data will be used to determine when different populations arrive in the lake and where they go.

What to look for:

White or yellow plastic tags are attached below the dorsal fin. If your fish has a yellow tag, there is a transmitter in the belly. Cut open the fish and remove the tag—they are small black cylinders, about half an inch in diameter and 2 inches long. These are valuable!

What to do:

For both white and yellow tags, take note of the date, approximate location of the fish, and the depth the fish was caught at.

Return all tags and information to Outdoor Emporium, 1701 4th Ave S in Seattle (just south of the ballparks) or mail to the address on the tag.

Raffle!

If you return tags to Outdoor Emporium, your name will be entered into a raffle to win a Shimano Bantam 50 reel and a Lamiglas Certified Pro 9' Mooching rod. A winner will be picked two weeks after the fishery is closed. Good luck!
